Handbook for Teaching Introductory Psychology Sep 10 2020 Like its predecessors, Volume III of the Handbook for Teaching Introductory Psychology provides introductory psychology instructors with teaching ideas and activities that can immediately be put into practice in the classroom. It contains an organized collection of articles from Teaching of Psychology (TOP), the official journal of the Society for the Teaching of Psychology, Division 2 of the American Psychological Association. Volume III contains 89 articles from TOP that have not been included in other volumes. Another distinction between this volume and its predecessors is its emphasis on testing and assessment. The book is divided into two sections. Section One, "Issues and Approaches in Teaching Introductory Psychology," contains 52 articles on critical issues, such as: how to approach the course; understanding students' interests, perceptions, and motives; students' existing knowledge of psychology (including their misconceptions); a comparison of introductory textbooks and tips on how to evaluate them; test questions and student factors affecting exam performance; an overview of different forms of feedback; giving extra credit; and how to deal with academic dishonesty. Section Two consists of 37 articles that present demonstrations, class and laboratory projects, and other techniques to enhance teaching and learning in both the introductory, as well as advanced courses in the discipline. This section is organized so as to parallel the order of topics found in most introductory psychology textbooks. Intended for academicians who teach the introductory psychology course and/or oversee grad assistants who teach the course, all royalties of the book go directly to the Society for the Teaching of Psychology to promote its activities to further improve the teaching of psychology.

Key Management Questions Aug 10 2020 Behind every great executive decision lies a smart question. Ask yourself this . Faced with a new budget or strategic choice, a potential employee or a client negotiation, a bright idea or an intractable problem, what questions do you need to ask? To test the projections, tackle the cause of problems, to make the right decision - the answer is simple. Ask the right question. Managers are all too often expected to lead with answers; to approach any situation armed with a company procedure or an off-the-shelf solution, but in an uncertain world, the right question is worth a world of standard answers. Asking the right question is the first step to understanding a business situation, and the first step to finding the right answer. Key Management Questions is your practical guide to intelligent management analysis and inquiry. It sets out searching questions to ask of your business, your colleagues and yourself - from shaping strategies to persuading people - and tells you where to find many of the answers. With this book you can make who, what, where, how and why your most effective business tools. In this practical guide Tom Lambert will help you to ask smarter business questions, of yourself, your business, your colleagues and your business partners, and across a full range of business challenges. Who are our most profitable customers? Who are our weakest competitors? What kind of managers do we need? Is this choice the best use of our resources? How long is the payback period? Discover the art of good questioning, and learn smart questions to ask about: Vision and Mission People, purpose and performance Collaboration and culture Strategy and leadership Solving business problems Making business choices Finance and business performance Markets, selling and marketing Influence and persuasion Technology and e-business Change and transformation Learning and development Choosing and using consultants The answers that you find will take you closer to the real drivers of your business.

The Psychology of Learning Jan 03 2020 This unique workbook promotes an active, hands-on, constructivist approach to the study of the Psychology of Learning, one that follows Bloom's (1956) taxonomy of instructional objectives. The constructivist approach encourages the reader to discover the answers to problems rather than simply look up solutions in a book. This approach assumes that, for information to be remembered, the reader must discover information and manipulate it by checking new information against old information, revising assumptions, beliefs, and knowledge when the old information no longer seems to work. This workbook replaces the passivity of memorizing definitions and procedures with the activities of graphing and interpreting of functional relations-the pillars of theory. Learning and Variables; Functions and Graphs; Basic Principles of Pavlovian Conditioning; Complexities of Pavlovian Conditioning; The Rescorla-Wagner Model; Principles of Operant Conditioning; "Creating" Behavior (Shaping); Schedules of Reinforcement; What Is a Reinforcer?; Punishment and Avoidance; "Simple" Stimulus Control; "Complex" Stimulus Control (Cognitive Processes); Choice and Self-Control (Allocation of Behavior).
