Constable Beats the Bounds Sep 08 2020 CRIME & MYSTERY. When Constable Nick leads a procession of villagers around Aidensfield's parish boundaries as part of an ancient custom, he realizes his work involves practices that have little connection with his constabulary duties. In this collection of tales, he finds a deserted farmhouse with its back door open and all the furnishing in place, then solves the problem of an intruder at another isolated house. Far beyond the call of duty are his efforts to get a bride to the church on time, his defence of a youth charged with a public order offence and his attempt to clear a young girl suspected of being a thief. But when St Aidan's Well almost dries up as a body is found on the moors above Aidensfield, Constable Nick knows he is duty bound to continue his individualistic performance as village constable.

The Bounds of Agency Sep 28 2019 The subject of personal identity is one of the most central and most contested and exciting in philosophy. Ever since Locke, psychological and bodily criteria have vied with one another in conflicting accounts of personal identity. Carol Rovane argues that, as things stand, the debate is unresolvable since both sides hold coherent positions that our common sense, she maintains, is conflicted; so any resolution to the debate is bound to be revisionary. She boldly offers such a revisionary theory of personal identity by first inquiring into the nature of persons. Rovane begins with a premise about the distinctive ethical nature of persons to which all substantive ethical doctrines, ranging from Kantian to egoist, can subscribe. From this starting point, she derives two startling metaphysical possibilities: there could be group persons composed of many human beings and multiple persons within a single human being. Her conclusions supports Locke's distinction between persons and human beings, but on altogether new grounds. These grounds lie in her radically normative analysis of the condition of personal identity, as the condition in which a certain normative commitment arises, namely, the commitment to achieve overall rational unity within a rational point of view. It is by virtue of this normative commitment that individual agents can engage one another specifically as persons, and possess the distinctive ethical status of persons. Carol Rovane is Associate Professor of Philosophy at Yale University. Originally published in 1997. Elements of Reason Jun 17 2021 Advances in the social sciences are used to uncover cognitive foundations of social decision making.

The Bounds of Self Oct 02 2022 This book provides a systematic reading of Martin Heidegger's project of "fundamental ontology", which he initially presented in *Being and Time* (1927) and developed further in his work on Kant. It shows our understanding of being to be that of a small set of a priori, temporally inflected, 'categorical' forms that articulate what, how, and whether things can be. As selves bound to and bounded by the world within which we seek to answer the question of how to live, we imaginatively generate these forms in order to open ourselves up to those intra-worldly entities which determinately instantiate them. This makes us, as selves, the source and unifying ground of being, even as this ground is hidden from us--until we do fundamental ontology. In showing how Heidegger develops these ideas, the author challenges key elements of the anti-Cartesian framework that most readers bring to his texts, arguing that his Kantian account of being has its roots in the anti-empiricism and Augustinianism of Descartes, and that his project relies implicitly on an essentially Cartesian 'meditational' method of reflective self-engagement that allows being to be brought to light. He also argues against the widespread tendency to see Heidegger as presenting the basic forms of being as in any way normative, from which he concludes, partially against Heidegger himself, that fundamental ontology is, while profound and worth pursuing for its own sake, inert with respect to the question of how to live. *The Bounds of Self* will be of interest to researchers and advanced students working on Heidegger, Kant, phenomenology, and existential philosophy.

Bounds and Characterizations of Record Statistics Mar 03 2020 This manuscript attempts to present in an organised manner characterisations and bounds of Record Values. There are several interesting articles presented in various journals and in some books on characterisations and bounds of Record Values. The aim is to provide a through presentation of these topics in this book. The book will be helpful to any one considering an independent study for characterisations and bounds of record values. The book presents the essential topics on the bounds for expectations of records and characterisations of probability distributions via record statistics.

Bounds of Sense Nov 03 2022 *The Bounds of Sense* is one of the most influential books ever written about Kant's philosophy, and is one of the key philosophical works of the late Twentieth century. Although it is probably best known for its criticism of Kant's transcendental idealism, it is also famous for the highly original manner in which Strawson defended and developed some of Kant's fundamental insights into the nature of subjectivity, experience and knowledge. The book had a profound effect on the interpretation of Kant's philosophy when it was first published in 1966 and continues to influence discussion of Kant, the soundness of transcendental arguments, and debates in epistemology and metaphysics generally.

Defy Gravity Nov 22 2021 New York Times best-selling author Caroline Myss draws from her years as a medical intuitive to show that healing is not only physical; it is also a mystical phenomenon that transcends reason. Inspired by ordinary people who overcame a wide array of physical and psychological ailments—from rheumatoid arthritis to cancer—Caroline dove into the works of the great mystics to gain a deeper understanding of healing's spiritual underpinnings. Based on these studies, she demonstrates how conventional and holistic medicine often fall short in times of need. Both systems rely upon a logical approach to curing illness when there is nothing reasonable about the emotional, psychological, or spiritual influences behind any ailment. Integral to this mystical healing approach is the engagement of the soul, which we experience through

exploring our seven shadow passions, building an empowered inner self around our seven inherent graces, and learning how to work with the mystical laws that govern it. This knowledge holds the key to understanding what it means to defy gravity and break through the boundaries of ordinary thought. You can heal any illness. You can channel grace. And you can learn to live fearlessly.

The Bounds of Choice Apr 27 2022 Presents a sustained and original challenge to the orthodox understanding of the relationship between morality and voluntary choice. The two main theses of the book are that we can be morally responsible for aspects of our character that we have not chosen or otherwise authored, and that we can enter into interpersonal commitments to which we have not voluntarily consented.

The Bounds of Reason Feb 23 2022 The Bounds of Reason: Habermas, Lyotard & Melanie Klein on Rationality is a highly original yet accessible study of the debate between modernity and postmodernity. Emilia Steuerman clearly explains the modernity/postmodernity dispute by examining the problem that has driven the whole debate: whether the use of reason is an emancipatory or enslaving force. Steuerman clearly sets out this debate by critically examining the arguments of two of its key proponents, Jurgen Habermas and Jean-François Lyotard. She clearly explains Habermas' defence of modernity and his attempt to salvage Enlightenment ideas of truth, justice, and freedom through the use of reason. She contrasts this with Lyotard's postmodernism and his scepticism about the use of reason, and its claims to universalism and objectivity. Throughout, Steuerman contrasts the Habermas-Lyotard debate with important insights from psychoanalytic theory, and shows how Habermas' notions of intersubjectivity and a community of shared language users can be compared and contrasted with Melanie Klein's theory of object relations.

Antitrust and the Bounds of Power Apr 03 2020 Since it first came into existence, antitrust law has become progressively more technical both in its form and in its manner of enforcement. Yet technicalities and doctrines give covert and not neutral solutions to a crucial dilemma which is of fundamental importance: how much private power is needed to preserve economic freedom from the intrusion of public power, and how much public power is needed to prevent private power becoming a threat to the freedom of others? In this lucidly written and challenging book, Giuliano Amato draws on his wide experience to examine the character of this dilemma and the way in which it has been addressed by legislatures and courts in the US and in Europe. His observations on the history and the doctrines of antitrust law and his conclusions as to how successfully the dilemma is being managed by the super economies of Europe and the US challenge conventional thinking. They will also stimulate economists and lawyers as well as business and lay people to consider more closely the future of antitrust laws across the globe.

Antitrust and the Bounds of Power Jun 25 2019 Examines dilemmas surrounding antitrust law and public and private power and the ways in which these problems have been addressed by legislatures and courts in the US and in Europe. Offers sometimes controversial observations on the history and doctrines of antitrust law, and conclusions as to how successfully the dilemma is being managed by the economies of the US and Europe. Amato is head of the Italian Antitrust Authority, a professor of law at the European University Institute in Florence, Italy, and a former Prime Minister of Italy. Distributed by ISBS. The Bounds of Freedom Nov 10 2020 The Straniak Philosophy Prize 1995 awarded by the Hermann and Marianne Straniak Foundation Sarnen/Switzerland This book explores Eastern and Western ideas of freedom and reveals the essential differences, as well as similarities, between Eastern and Western cultural values. Inspired by an ancient Greek myth recounted by Protagoras, the authors suggest that three important values tend to motivate human activity: achieving pleasure, achieving results, and obeying moral law. Then, drawing on intellectual sources ranging from traditional Hinduism to modern existentialism, the authors proceed to show how these values - pleasure, efficiency, and morality - determine the idea of freedom as it appears in various philosophical systems of East and West. In the course of their analysis, the idea of freedom is itself emancipated from the usual kinds of cultural boundaries that have so often limited both its usefulness and its timeliness.

The Bounds of Reason Jun 29 2022 Game theory is central to understanding human behavior and relevant to all of the behavioral sciences—from biology and economics, to anthropology and political science. However, as The Bounds of Reason demonstrates, game theory alone cannot fully explain human behavior and should instead complement other key concepts championed by the behavioral disciplines. Herbert Gintis shows that just as game theory without broader social theory is merely technical bravado, so social theory without game theory is a handicapped enterprise. This edition has been thoroughly revised and updated. Reinvigorating game theory, The Bounds of Reason offers innovative thinking for the behavioral sciences.

Bounds of Justice Jun 05 2020 Argues for a concept of justice that takes account of boundaries, institutions and human diversity.

John Clare and the Bounds of Circumstance May 29 2022 As a working-class poet, born in 1793 to an impoverished family in rural England, John Clare has often been considered of interest for the unusual nature of his life and career rather than for his poetry. In this book, Johanne Clare argues that he should be taken seriously both as a poet and as a representative figure in a period of social and agrarian upheaval. She discusses Clare's political attitudes and his views on the social issues which most affected him - poverty, economic inequality, class prejudice, and the enclosure movement - and shows how his social identity and experience were intricately related to his major writings.

Instead, he finds something far worse.

Deterministic and Stochastic Error Bounds in Numerical Analysis Oct 10 2020 In these notes different deterministic and stochastic error bounds of numerical analysis are investigated. For many computational problems we have only partial information (such as n function values) and consequently they can only be solved with uncertainty in the answer. Optimal methods and optimal error bounds are sought if only the type of information is indicated. First, worst case error bounds and their relation to the theory of n-widths are considered; special problems such approximation, optimization, and integration for different function classes are studied and adaptive and nonadaptive methods are compared. Deterministic (worst case) error bounds are often unrealistic and should be complemented by different average error bounds. The error of Monte Carlo methods and the average error of deterministic methods are discussed as are the conceptual difficulties of different average errors. An appendix deals with the existence and uniqueness of optimal methods. This book is an introduction to the area and also a research monograph containing new results. It is addressed to a general mathematical audience as well as specialists in the areas of numerical analysis and approximation theory (especially optimal recovery and information-based complexity).

The Bounds of Love Mar 15 2021 The Bounds of Love is an introduction to how biblical law should be understood in New Testament times. Theologically rich and yet written as an easy introduction, this volume covers the basics about God's law for modern times and addresses some of the most difficult theological and ethical questions in a simple way. God's law is both simple and profound, and the commands to love God and love your neighbor are its heart and soul.

The Bounds of Myth May 17 2021 "This book shed light on the internal shapes of the mythological discourse, showing the way in which myth borders religion, science, literature, theology, i.e., other forms of rationality. The contributing authors of the volume claim that myth is a valid form of thought and that the former evolves within other forms of discourse, even though its composition is independent and even precedes the latter"--

Normativity Within the Bounds of Plural Reasons May 05 2020 The Nordic Summer University is committed to new developments in academic thought and practice. In this inaugural volume of Summertalk, NSU is proud to present the 2006 keynote lectures in print. The book offers a condensed tour de force through the major ethical theories of the twentieth century. In three historical chapters, beginning with Sidgwick and Nietzsche and ending with a response to the emergence of applied ethics, Sergio Cremaschi gives a unique overview of contemporary concerns about normative thinking under plural reasons.

The Bounds of Possibility Sep 01 2022 In general, a given object could have been different in certain respects. For example, the Great Pyramid could have been somewhat shorter or taller; the Mona Lisa could have had a somewhat different pattern of colours; an ordinary table could have been made of a somewhat different quantity of wood. But there seem to be limits. It would be odd to suppose that the Great Pyramid could have been thimble-sized; that the Mona Lisa could have had the pattern of colours that actually characterizes The Scream; or that the table could have been made of the very quantity of wood that in fact made some other table. However, there are puzzling arguments that purport to show that so long as an object is capable of being somewhat different in some respect, it is capable of being radically different in that respect. These arguments rely on two tempting thoughts: first, that an object's capacity for moderate variation is a non-contingent matter, and second, that what is possibly possible is simply possible. The Bounds of Possibility systematically investigates competing strategies for resolving these puzzles, and defends one of them. Along the way it engages with foundational questions about the metaphysics of modality.

Reason Within the Bounds of Religion Jul 07 2020 Expanding on his 1976 study of the bearing of Christian faith on the practice of scholarship, Wolterstorff has added a substantial new section on the role of faith in the decisions scholars make about their choice of subject matter.

The Bounds of Cognition Oct 22 2021 An alarming number of philosophers and cognitive scientists have argued that mind extends beyond the brain and body. This book evaluates these arguments and suggests that, typically, it does not. A timely and relevant study that exposes the need to develop a more sophisticated theory of cognition, while pointing to a bold new direction in exploring the nature of cognition Articulates and defends the "mark of the cognitive", a common sense theory used to distinguish between cognitive and non-cognitive processes Challenges the current popularity of extended cognition theory through critical analysis and by pointing out fallacies and shortcoming in the literature Stimulates discussions that will advance debate about the nature of cognition in the cognitive sciences

Herbert A. Simon Jul 27 2019 In this informed and discerning study, Crowther-Heyck explores Simon's contributions to science and their influences on modern life and thought. For historians of science, social science, technology, and twentieth-century American intellectual and cultural history, this account of Herbert Simon's life and work provides a rich and valuable perspective. Rarely does the world see as versatile a figure as Herbert Simon. He was a Nobel laureate in economics; an accomplished political scientist; winner of a lifetime achievement award from the American Psychological Association; and founder of the department of computer science at Carnegie Mellon University. In all his work in all these fields, he pursued a single goal - to create a science that could map the bounds of human reason and so enlarge its role in human affairs. Hunter Crowther-Heyck uses the career of this unique individual to examine the evolution of the social sciences after World War II, particularly Simon's creation of a new field, systems science, which joined together two distinct, powerful approaches to human behavior, the sciences of choice and control. Simon sought to develop methods by which human behavior: specifically human problem-solving, could be modeled and simulated. Regarding mind and machine as synonymous, Simon applied his models of human behavior to many other areas, from public administration and business management to artificial intelligence and the design of complex social and technical systems. In this informed and discerning study, Crowther-Heyck explores Simon's contributions to science and their influences on modern life and thought.
