Experiment and Exploration: Forms of World-Disclosure Jun 25 2022 This book deals with contemporary epistemological questions, connecting Educational Philosophy with the field of Science- and Technology Studies. It can be understood as a draft of a general theory of world-disclosure, which is in its core a distinction between two forms of world-disclosure: experiment and exploration. These two forms have never been clearly distinguished before. The focus lies on the experimental form of world-disclosure, which is described in detail and in contrast to the explorational form along the line of twenty-one characteristics, which are mainly derived from empirical studies of experimental work in the field of natural sciences. It can also be understood as an attempt to integrate elements of the Anglo-Saxon Philosophy of Science with elements of the German tradition of Educational Philosophy. This is also reflected in the style of writing. In accordance to the content-level of the book, the argument for experimental forms of world-disclosure is written in an essayistic, readable style, which can be understood as an experimental form of writing. This book is a translation of the doctoral thesis 'Experiment und Exploration. Bildung als experimentelle Form der Welterschließung' (summa cum laude). The thesis was published in German in 2010 by Transcript (Bielefeld) in the series called 'Theorie Bilden', edited by Prof. Dr. Hannelore Faulstich-Wieland, Prof. Dr. Hans-Christoph Koller, Prof. Dr. Karl-Josef Pazzini and Prof. Dr. Michael Wimmer.

The 2,000 Percent Solution Nov 06 2020 Organizations, like people, are creatures of habit. They tend to approach problems in predictable ways. This revolutionary book argues that such ingrained habits, which often masquerade as efficient procedures, actually obstruct growth. The 2,000 Percent Solution introduces "stall busting," a process that shows you how to recognize typical stalls (like poor communications, disbelief, misconceptions, procrastination, tradition and bureaucracy) and how to overcome them. Through unorthodox examples ranging from the sinking of the Titanic to sketches attributed to Leonardo da Vinci for a bicycle, The 2,000 Percent Solution redirects knee-jerk reactions onto more productive paths. In addition, you'll learn about a new set of thought processes for designing and implementing solutions that will reap benefits 20 times greater or faster than the same tired "normal" solutions. Packed with specific examples, advice and questions to help you improve your organization's process weaknesses, you'll learn how to go beyond today's best practices into the uncharted realm of what needs to be imagined and accomplished. Since the first printing of this book in 1999, organizations all over the world have made The 2,000 Percent Solution a daily resource for overcoming the dual challenges of tough competitors and a difficult business environment. We are particularly pleased that the book has become popular in the rapidly growing and changing markets of China. Readers say the advice and examples are as timely today as when the book was first published. We look forward to hearing your comments and questions at mitchell@mitchellandco.com.

TRIZ for Engineers: Enabling Inventive Problem Solving Jan 28 2020 TRIZ is a brilliant toolkit for nurturing engineering creativity and innovation. This accessible, colourful and practical guide has been developed from problem-solving workshops run by Oxford Creativity, one of the world's top TRIZ training organizations started by Gadd in 1998. Gadd has successfully introduced TRIZ to many major organisations such as Airbus, Sellafeld Sites, Saint-Gobain, DCA, Doosan Babcock, Kraft, Qinetiq, Trelleborg, Rolls Royce and BAE Systems, working on diverse major projects including next generation submarines, chocolate packaging, nuclear clean-up, sustainability and cost reduction. Engineering companies are increasingly recognising and acting upon the need to encourage successful, practical and systematic innovation at every stage of the engineering process including product development and design. TRIZ enables greater clarity of thought and taps into the creativity innate in all of us, transforming random, ineffective brainstorming into targeted, audited, creative sessions focussed on the problem at hand and unlocking the engineers' knowledge and genius to identify all the relevant solutions. For good design engineers and technical directors across all industries, as well as students of engineering, entrepreneurship and innovation, TRIZ for Engineers will help unlock and realise the potential of TRIZ. The individual tools are straightforward, the problem-solving process is systematic and repeatable, and the results will speak for themselves. This highly innovative book: Satisfies the need for concise, clearly presented information together with practical advice on TRIZ and problem solving algorithms Employs explanatory techniques, processes and examples that have been used to train thousands of engineers to use TRIZ successfully Contains real, relevant and recent case studies from major blue chip companies Is illustrated throughout with specially commissioned full-colour cartoons that illustrate the various concepts and techniques and bring the theory to life Turns good engineers into great engineers.

Hints and Tips for the Practical Plumber Jul 14 2021 Hints & Tips for the Practical Plumber is a unique and essential guide for all plumbing students leaving college and plumbers wanting to set up on their own, and can even be used to help complete the NVQ2 qualification. Based on over 9 years of experience working as a plumber, Jo Lawrence's insights and practical tips ensure that the transition from college to the real world of plumbing is a pain-free and positive step. Designed to build confidence and help plumbers navigate the often scary realities of setting up on their own, Hints & Tips is the must-have handbook for all plumbers. This handbook is suitable for students leaving college with City & Guilds or NVQ Level 2 Certificates: 6089, 6035, 6129, 6189 (or the equivalent) with or without a formal apprenticeship. It supports those searching for placements to gain the necessary experience, and makes a handy encouragement for anyone who has attempted to go into the plumbing industry in the past but has not managed to get a work placement. "Most plumbing books are written for students training as plumbers, not for plumbers plumbing in the real world. In my experience, many students that train in college can't find someone to take them on to show them the ropes, and so fall back into other jobs. Hints & Tips teaches them how to turn their college skills into a thriving business, teaching them what they don't learn in college about how to plumb," Jo comments on the inspiration behind her book.

The Produce Contamination Problem Mar 10 2021 Understanding the causes and contributing factors leading to outbreaks of food-borne illness associated with contamination of fresh produce is a worldwide challenge for everyone from the growers of fresh-cut produce through the entire production and delivery process. The premise of The Produce Contamination Problem is that when human pathogen contamination of fresh produce occurs, it is extremely difficult to reduce pathogen levels sufficiently to assure microbiological safety with the currently available technologies. A wiser strategy would be to avoid crop production conditions that result in microbial contamination to start. These critical, problem-oriented chapters have been written by researchers active in the areas of food safety and microbial contamination during production, harvesting, packing and fresh-cut processing of horticultural crops, and were designed to provide methods of contamination avoidance. Coverage includes policy and practices in the United States, Mexico and Central America, Europe, and Japan. Addresses food-borne contaminations from a prevention view, providing proactive solutions to the problems. Covers core sources of contamination and methods for identifying those sources Includes best practice and regulatory information

Creative Model Construction in Scientists and Students Nov 18 2021 How do scientists use analogies and other processes to break away from old theories and generate new ones? This book documents such methods through the analysis of video tapes of scientifically trained experts thinking aloud while working on unfamiliar problems. Some aspects of creative scientific thinking are difficult to explain, such as the power of analogies, and the enigmatic ability to learn from thought experiments. This book is a window on that world.
