Keynes' General Theory Sep 22 2021 This volume, a collection of essays by internationally known experts in the area of the history of economic thought and of the economics of Keynes and macroeconomics in particular, is designed to celebrate the 75th anniversary of the publication of The General Theory. The essays contained in this volume are divided into four sections. The first section contains three essays that explore the concept of fundamental uncertainty and its unique role in The General Theory. The second section contains five essays that examine the place of The General Theory in the history of macroeconomics since 1936. The third section contains three essays that explore the interrelationships among Keynes, Friedman, Kaldor, Marx and Sraffa and their approaches to macroeconomic theory and policy. The final section contains four essays that provide several new interpretations of The General Theory and its position within macroeconomics. Keynes's General Theory is intended for those students and scholars who are interested in the economics of Keynes and the rich variety of approaches to macroeconomic theory and policy.

Routledge International Handbook of Contemporary Social and Political Theory Feb 25 2022 The Handbook will address a range of issues that have emerged out of recent social and political theory. It will focus on key themes as opposed to schools of thought or major theorists. Each chapter is an emerging, cutting edge topic that is of interest both to social theory and to political theory. Most topics will have a clear and substantive focus on social or political problems.

Visualization: Theory and Practice in Science Education May 19 2021 External representations (pictures, diagrams, graphs, concrete models) have always been valuable tools for the science teacher. This book brings together the insights of practicing scientists, science education researchers, computer specialists, and cognitive scientists, to produce a coherent overview. It links presentations about cognitive theory, its implications for science curriculum design, and for learning and teaching in classrooms and laboratories.

Computer Science – Theory and Applications Jun 07 2020 This book constitutes the proceedings of the 13th International Computer Science Symposium in Russia, CSR 2018, held in Moscow, Russia, in May 2018. The 24 full papers presented together with 7 invited lectures were carefully reviewed and selected from 42 submissions. The papers cover a wide range of topics such as algorithms and data structures; combinatorial optimization; constraint solving; computational complexity; cryptography; combinatorics in computer science; formal languages and automata; algorithms for concurrent and distributed systems; networks; and proof theory and applications of logic to computer science.

Telecommunications Demand in Theory and Practice Apr 29 2022 *Telecommunications Demand in Theory and Practice*, which builds upon the author's seminal 1980 book, *Telecommunications Demand: A Review and Critique*, provides comprehensive analyses of the determinants and structure of telecommunications demands in the United States and Canada. Theory and empirical application receive equal emphasis with a heavy focus on the developments and econometric research since the divestiture of AT&T in 1984. For the first time, a detailed theoretical analysis of business telecommunications demand on subscriber and usage consumption externalities is presented. *Telecommunications Demand in Theory and Practice* is without peer in the documentation and analysis of price elasticities of demand for telecommunications services. This new book also includes a comprehensive bibliography with over 500 entries related to telecommunications demand and pricing. *Telecommunications Demand* will appeal to both academic and consulting economists, telecommunications industry analysts and regulators, and to teachers of courses in applied econometrics and regulated industries.

Mathematical Applications of Category Theory Oct 24 2021 Mathematicians interested in understanding the directions of current research in set theory will not want to overlook this book, which contains the proceedings of the AMS Summer Research Conference on Axiomatic Set Theory, held in Boulder, Colorado, June 19-25, 1983. This was the first large meeting devoted exclusively to set theory since the legendary 1967 UCLA meeting, and a large majority of the most active research mathematicians in the field participated. All areas of set theory, including constructibility, forcing, combinatorics and descriptive set theory, were represented; many of the papers in the proceedings explore connections between areas. Readers should have a background of graduate-level set theory. There is a paper by S. Shelah applying proper forcing to obtain consistency results on combinatorial cardinal 'invariants' below the continuum, and papers by R. David and S. Friedman on properties of \aleph_1 . Papers by A. Blass, H.D. Donder, T. Jech and W. Mitchell involve inner models with measurable cardinals and various combinatorial properties. T. Carlson largely solves the pin-up problem, and D. Velleman presents a novel construction of a Souslin tree from a morass. S. Todorcevic obtains the strong failure of the \aleph_1 -principle from the Proper Forcing Axiom and A. Miller discusses properties of a new species of perfect-set forcing. H. Becker and A. Kechris attack the third Victoria Delfino problem while W. Zwicker looks at combinatorics on $P_{\aleph_1}(\aleph_1)$ and J. Henle studies infinite-exponent partition relations. A. Blass shows that if every vector space has a basis then \aleph_1 holds. I. Anellis treats the history of set theory, and W. Fleissner presents set-theoretical axioms of use in general topology.

Monetary Theory in Retrospect Jul 09 2020 An objective and perceptive account of the literature of monetary theory, this volume, by a central banker who has studied monetary theory over the last quarter of a century, clearly shows how its inherent complexity is much enriched by the study of its history. In three parts Filippo Cesarano: focuses on the innovative ideas of distinguished economists who anticipated modern theories, elaborating on them along lines that suggest original research programmes examines the impact of expectations on the effectiveness of monetary policy, illustrating how different assumptions within the classical paradigm lead to diverse hypotheses and policy design investigates the role of monetary theory in shaping monetary institutions. Deserving of a wide readership among both academic economists and monetary policy practitioners, this collection of essays is key reading for students and researchers engaged with monetary theory and the history of economics and policy makers seeking to weigh up the assumptions underlying different theories in order to select the models best suited to the problems they face.

Rock, Paper, Scissors Nov 12 2020 Game Theory is the study of co-operation and the underlying strategies that shape human behaviour. In *Rock, Paper, Scissors*, Len Fisher unearths the wide-ranging applications for this science, and the ways we can use its discoveries to find effective means to co-operate in daily life. Whether we want to understand where a shared supply of teaspoons disappears to, or why countries take themselves to the brink of nuclear war, Game Theory reveals the decision-making process. Len Fisher's writing brings this science of interaction to life with anecdotes and applications that are sure to spark the imagination and give you pause for thought. Dealing with collaboration, co-operation, completion and confrontation, *Rock, Paper, Scissors* is essential reading for anyone interested in what it takes to get people to work together.

Generative Grammar Jan 03 2020 This book provides a critical review of the development of generative grammar, both transformational and non-transformational, from the early 1960s to the present, and presents contemporary results in the context of an overall evaluation of recent research in the field. Geoffrey Horrocks compares Chomsky's approach to the study of grammar, culminating in Government and Binding theory, with two other theories which are deliberate reactions to this framework: Generalised Phrase Structure Grammar and Lexical-Functional Grammar. Whilst proponents of all

three models regard themselves as generative grammarians, and share many of the same objectives, the differences between them nevertheless account for much of the recent debate in this subject. By presenting these different theories in the context of the issues that unite and divide them, the book highlights the problems which arise in any attempt to establish an adequate theory of grammatical representation.

The Fear Economy: A Theory of Output, Interest, and Safe Assets Jan 15 2021 This paper presents a fear theory of the economy, based on the interplay between fear of rare disasters and the interest rate on safe assets. To do this, I study the macroeconomic consequences of government-administered interest rates in the neoclassical real business cycle model. When the government has the power to fix the safe real interest rate, the gap between the 'sticky real safe rate' and the 'neutral rate' can generate far-reaching aggregate distortions. When fear exogenously rises, the demand for safe assets rise and the neutral rate falls. If the central bank does not lower the safe rate by the same amount, savings rise leading to a decline in consumption and aggregate demand. The same mechanism works in reverse, when fear falls. Quantitatively, I show that a single fear factor can simultaneously (i) generate cross-correlations in output, labor, consumption, and investment consistent with the postwar US economy; and (ii) generates variation in equity prices, bond prices, and a large risk premium in line with the asset pricing data. Six novel insights emerge from the model: (1) actively regulating the safe interest rate (in both directions) can mitigate the fluctuations generated by fear cycles; (2) recessions will be deeper and longer when central banks accept the zero lower bound and are unwilling to use negative rates; (3) a commitment to use negative rates in recessions—even if never implemented—raises both the short- and long-run real neutral rates, and moderates the business cycle; (4) counter-cyclical fiscal policy can act as disaster insurance and be expansionary by reducing fear; (5) quantitative easing can be narrowly effective only when fear is high at the lower bound; and (6) when fear is high, especially at the lower bound, policies that boost productivity also help fight recessions.

Intelligent Agents V: Agents Theories, Architectures, and Languages Aug 29 2019 The leading edge of computer science research is notoriously fickle. New trends come and go with alarming and unflinching regularity. In such a rapidly changing world, the fact that research interest in a subject lasts more than a year is worthy of note. The fact that, after five years, interest not only remains, but actually continues to grow is highly unusual. As 1998 marked the 25th birthday of the International Workshop on Agent Theories, Architectures, and Languages (ATAL), it seemed appropriate for the organizers of the original workshop to comment on this remarkable growth, and reflect on how the world has developed and matured. The first ATAL workshop was co-located with the Eleventh European Conference on Artificial Intelligence (ECAI-94), which was held in Amsterdam. The fact that we chose an AI conference to co-locate with is telling: at that time, we expected most researchers with an interest in agents to come from the AI community. The workshop, which was planned over the summer of 1993, attracted 32 submissions, and was attended by 55 people. ATAL was the largest workshop at ECAI-94, and the clear enthusiasm on behalf of the community made the decision to hold another ATAL workshop simple. The ATAL-94 proceedings were formally published in January 1995 under the title *Intelligent Agents*, and included an extensive review article, a glossary, a list of key agent systems, and — unusually for the proceedings of an academic workshop — a full subject index. The high scientific and production values embodied by the ATAL-94 proceedings appear to have been recognized by the community, and resulted in ATAL proceedings being the most successful sequence of books published in Springer-Verlag's *Lecture Notes in Artificial Intelligence* series.

Philosophies and Theories for Advanced Nursing Practice Aug 22 2021 *Philosophies and Theories for Advanced Nursing Practice, Second Edition* was developed as an essential resource for advanced practice students in master's and doctoral programs. This text is appropriate for students needing an introductory understanding of philosophy and how a theory is constructed as well as students and nurses who understand theory at an advanced level. The Second Edition discusses the AACN DNP essentials which is critical for DNP students as well as PhD students who need a better understanding of the DNP-educated nurse's role. *Philosophies and Theories for Advanced Nursing Practice, Second Edition* covers a wide variety of theories in addition to nursing theories. Coverage of non-nursing related theory is beneficial to nurses because of the growing national emphasis on collaborative, interdisciplinary patient care. The text includes diagrams, tables, and discussion questions to help students understand and reinforce core content.

Kozier & Erb's Fundamentals of Nursing Australian Edition Jun 27 2019 *Kozier and Erb's Fundamentals of Nursing* prepares students for practice in a range of diverse clinical settings and help them understand what it means to be a competent professional nurse in the twenty-first century. This third Australian edition has once again undergone a rigorous review and writing process. Contemporary changes in the regulation of nursing are reflected in the chapters and the third edition continues to focus on the three core philosophies: Person-centred care, critical thinking and clinical reasoning and cultural safety. Students will develop the knowledge, critical thinking and clinical reasoning skills to deliver care for their patients in ways that signify respect, acceptance, empathy, connectedness, cultural sensitivity and genuine concern.

This title summarizes the contributions of the main paradigms that emerged at Stanford in those three decades, and describes the sociological conditions under which this environment came about.

Towards a Theory of Spacetime Theories Mar 17 2021 This contributed volume is the result of a July 2010 workshop at the University of Wuppertal Interdisciplinary Centre for Science and Technology Studies which brought together world-wide experts from physics, philosophy and history, in order to address a set of questions first posed in the 1950s: How do we compare spacetime theories? How do we judge, objectively, which is the "best" theory? Is there even a unique answer to this question? The goal of the workshop, and of this book, is to contribute to the development of a meta-theory of spacetime theories. Such a meta-theory would reveal insights about specific spacetime theories by distilling their essential similarities and differences, deliver a framework for a class of theories that could be helpful as a blueprint to build other meta-theories, and provide a higher level viewpoint for judging which theory most accurately describes nature. But rather than drawing a map in broad strokes, the focus is on particularly rich regions in the "space of spacetime theories." This work will be of interest to physicists, as well as philosophers and historians of science working with or interested in General Relativity and/or Space, Time and Gravitation more generally.

Mark Z Danielewski's 'House of Leaves' and Deleuze and Guattari's Rhizome Theory Oct 31 2019 'House of Leaves' by Mark Z. Danielewski is a Postmodern, Poststructural novel that broke boundaries when it was published in 2000. Twenty four years earlier, in 1976, philosophers Deleuze and Guattari proposed a theoretical model for the ultimate Poststructural book form in their paper 'Introduction to the Rhizome'. In this highly regarded academic paper from 2002, Hazel Stuart puts forward her argument for why Danielewski's 'House of Leaves' can be regarded a novel of truly rhizomatic form.

Invariant Theory in All Characteristics Jun 19 2021 This volume includes the proceedings of a workshop on Invariant Theory held at Queen's University (Ontario). The workshop was part of the theme year held under the auspices of the Centre de recherches mathématiques (CRM) in Montreal. The gathering brought together two communities of researchers: those working in characteristic 0 and those working in positive characteristic. The book contains three types of papers: survey articles providing introductions to computational invariant theory, modular invariant theory of finite groups, and the invariant theory of Lie groups; expository works recounting recent research in these three areas and beyond; and open problems of current interest. The book is suitable for graduate students and researchers working in invariant theory.

Papers on Group Theory and Topology Aug 02 2022 The work of Max Dehn (1878-1952) has been quietly influential in mathematics since the beginning of the 20th century. In 1900 he became the first to solve one of the famous Hilbert problems (the third, on the decomposition of polyhedra), in 1907 he collaborated with Heegaard to produce the first survey of topology, and in 1910 he began publishing his own investigations in topology and combinatorial group theory. His influence is apparent in the terms Dehn's algorithm, Dehn's lemma and Dehn surgery (and Dehnsche Gruppenbilder, generally known in English as Cayley diagrams), but direct access to his work has been difficult. No edition of his works has been produced, and some of his most important results were never published, at least not by him. The present volume is a modest attempt to bring Dehn's work to a wider audience, particularly topologists and group theorists curious about

the origins of their subject and interested in mining the sources for new ideas. It consists of English translations of eight works : five of Dehn's major papers in topology and combinatorial group theory, and three unpublished works which illuminate the published papers and contain some results not available elsewhere. In addition, I have written a short introduction to each work, summarising its contents and trying to establish its place among related works of Dehn and others, and I have added an appendix on the Dehn-Nielsen theorem (often known simply as Nielsen's theorem) .
